Italy: a visible decline in public deficit and debt ratio in 2021

- Today, Italy published national accounts data for 2021, including key fiscal indicators. Real GDP increased by 6.6% in 2021, while nominal GDP was up by 7.5%. Both are exceptionally high in a historical context. Strong GDP growth accelerated the adjustment of fiscal indicators last year, and this is the focus of this note.

- After surging to 9.6% in 2020 due to the COVID-19 shock, Italy's budget deficit/GDP declined to 7.2% in 2021. While it is still high, it is significantly better than the government's most recent estimate and the European Commission (EC) forecast from last November (both at 9.4% of GDP), as well as the December consensus estimate (at EUR 163.7bn or around 9.2% of GDP).

- The positive surprise mainly came from a better dynamic in general government revenue, which was supported by stronger growth and improved collection, which, if confirmed, should bode well for the future, too. Moreover, thanks to the improved macroeconomic outlook, the usage of the COVID-19 emergency measures was probably lower than initially expected, and this might have brought forward a better dynamic in public spending.

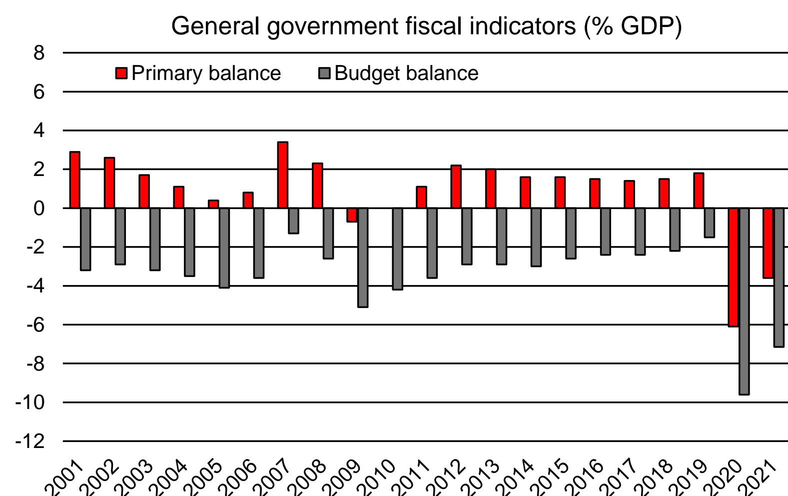
- Public expenditure dynamic was expected to improve further this year, and partly next year, due to the complete unwinding of temporary, emergency measures related to the COVID-19 crisis. Still, the need to mitigate the impact of the invasion of Ukraine by Russia on energy prices is now likely to slow the adjustment in public spending this year.

- A lower budget deficit accelerated the reduction of the public debt/GDP ratio in 2021, to 150.4%. This is an important achievement at a time of increasing uncertainty abroad, which is likely to dampen economic prospects.

In greater detail:

The budget deficit declined to 7.2% of GDP in 2021. The decline reflects an improvement in the primary deficit to 3.6% of GDP in 2021, while the interest expenditure/GDP ratio stood at 3.5%.

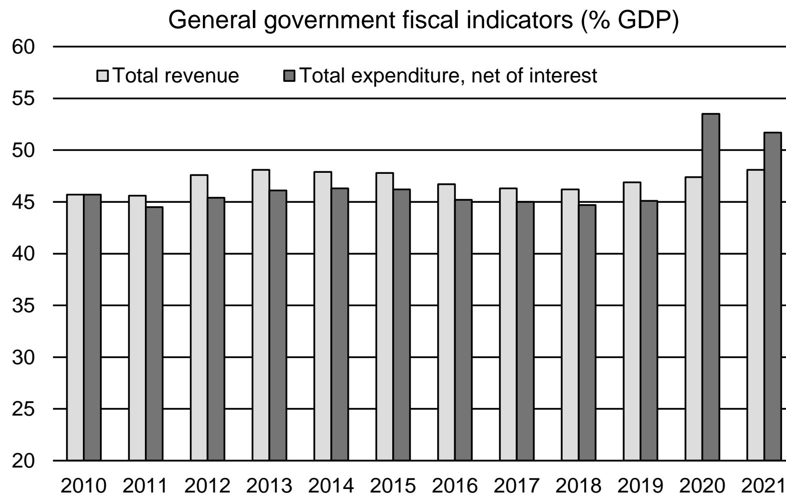
CHART 1: ABOUT A THIRD OF THE 2020 DEFICIT INCREASE WAS CORRECTED LAST YEAR



Source: Istat, UniCredit Research

In 2021, the budget balance was positively affected by a strong increase in revenue and a lower increase in public spending (net of interest), compared, for example, with the latest EC forecast: 48.1% of GDP vs. 46.8% (estimated by the EC) and 51.7% of GDP vs. 52.7%.

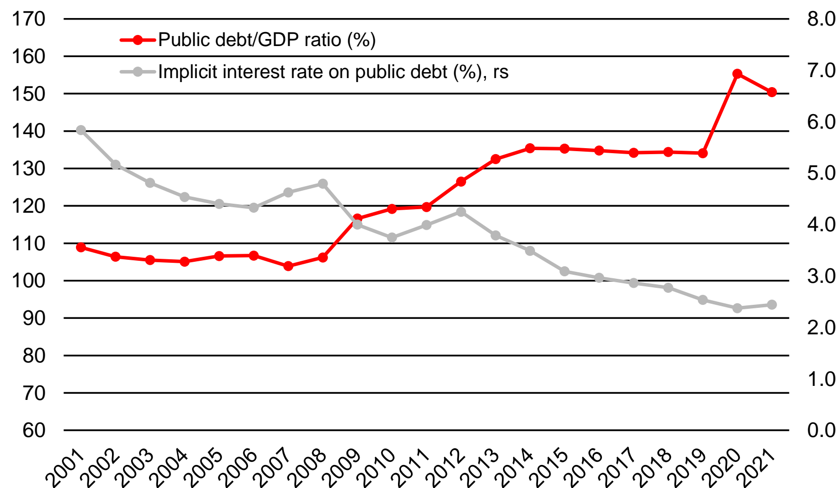
CHART 2: HIGHER REVENUE THAN INITIALLY EXPECTED



Source: Istat, UniCredit Research

The public debt/GDP ratio declined by 5pp to 150.4% in 2021. While it is still about 16pp above the pre-crisis level, the acceleration in the adjustment path is good news at a time of increasing uncertainty. The EC forecast was for a debt ratio of 154.4% in 2021, declining to 151% by 2023.

CHART 3: PUBLIC DEBT RATIO HAS STARTED TO ADJUST



Source: Istat, Bank of Italy, UniCredit Research

The cost of public debt stood at 2.4% in 2021. This low starting point will mitigate the impact that the increase in BTP yields at issuance will have on the cost of public debt in 2022, which is currently forecast to remain close to 2.4%.
